Breakthrough in Glass Protection

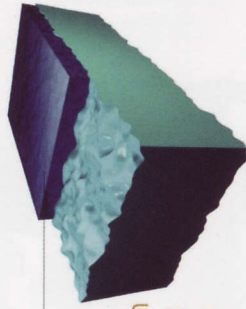

The seemingly smooth surface of glass consists of microscopic ridges and valleys which creates a favourable environment for the buildup of contaminants such as soap scum, hard water deposits and grime.

In time, the glass surface will visibly dull and become difficult to clean. This will result in high maintenance and premature replacement costs due to deterioration.

Rough surface allows contaminants to adhere and build up

Magnified Glass Surface (x 100)

Vitroglaze fuses with the surface leaving a protective barrier

Vitroglaze is a permanent coating that prevents the adhesion and buildup of contaminants onto the glass surface. It also provides water and oil repellent properties.

Working similar to non-stick cookware your glass becomes easier to clean, without the need of harsh chemicals.

Vitroglaze saves valuable time and effort, guaranteed.

shower screens

Easy to Clean

- Reduces cleaning time by up to 90%.
- A simple wipe with a soapy sponge or a cleaning mitt is all that is required.
- Saves on chemical costs.

Protects

- Prevents permanent damage caused by etching due to hard water deposits and soap scum.
- Helps maintain 'as new' clarity.

Kind to the Environment

- Vitroglaze is safe for the environment.
- No need for harsh, environmentally damaging chemicals.

Balustrading

Easy to Clean

Contaminants will clean easily off the Vitroglaze non-stick coating and the glass will retain it's 'as new' appearance.

Protection

Protects against etching and deterioration from salt spray, chlorine, pollution, hard water deposits and most other contaminants.
